Document History

Version	Date	Description of Change	Hardware Version
V 1.0	2022-2-10	Preliminary Release	V 1.0
V 1.0	2022-3-23	Update the camera module pin definition.	V 1.0
V 1.0.1	2022-4-6	Update the document home page, header and footer; Update the description of PCIe signals; Update the product feature description.	V 1.0
V 1.1	2022-7-4	Update 4.20 System power control connector signal definition; Change button to power on; Updated the description of the Recovery mode in section 3.3Release SW1 button after more than 3 seconds; Add parameters when the loading board is equipped with the AGX ORIN module.	V 1.0
V 2.0	2023-3-13	Added support for V2.0 hardware.	V1.0/V2.0
V 2.1	2024-1-4	Modify the product manual template; Added interface test description; Added Jetpack5.* version GPIO mapping number;	V1.0/V2.0
V 2.2	2024-3-21	Add Jetpack6.* version, RS232 serial port device name description.	V1.0/V2.0
V 2.3	2025-1-6	Modify font	V1.0/V2.0

Hardware Update History

Version	Date	Description of Change
V 1.0	2022-2-10	Initial version
V2.0	2023-3-13	1. Add PCIe X16 connector (J9) Soft shutdown and power-off function. 2. Added the AGX Xavier module and AGX ORIN module RTC Power supply selection function (J46); 3. replace the J25 connector model: XH2.54-4P -> 2.54 single-row pins with 4-pin spacing;

Electronic components and circuits are very sensitive to electrostatic discharge, although the company will design the main interface on the board card to do anti-static protection design, but it is difficult to do anti-static safety protection for all components and circuits. Therefore, it is recommended that you take ESD safety measures when handling any circuit board component.

ESD safety measures include but are not limited to the following:

1. Put the card in an ESD bag during transportation or storage. Do not take out the card until installation and deployment.
2. Before touching the board, release the static electricity stored in the body: Wear a grounding wrist strap.
3. Operate circuit boards only in electrostatic discharge safe areas.
4. Avoid moving circuit boards in carpeted areas.
5. Avoid direct contact with electronic components on the board through edge contact.

1 Introduction

Y-C8 is a standard Mini-ITX carrier with NVIDIA Jetson AGX Orin/AGX Xavier series core modules. Suitable for compact deployment requirements. The main interface is designed for electrostatic safety protection, and the power supply application scheme with high reliability is adopted. The input power supply has the functions of overvoltage and reverse polarity protection, and has a rich external interface. All the devices on the board adopt wide temperature models. In order to facilitate the design of the shell structure, the important interfaces of the Y-C8 carrier board are designed in one side.

The Y-C8 carrier board can carry hundreds of functional modules through one PCIe x16 connector (supporting only PCIe x8 signals) and two miniPCIe connectors (including USB2.0 and PCIe X1 signals) to achieve further expansion of system functions. Can be expanded to 4 full speed USB3.0 signals, 4 gigabit network signals, 2 full speed SATA signals, can also be equipped with up to 256G Mini PCIe storage, various formats of video capture/output card, AD capture card, multi-serial card, sound capture/output card, multi-function I/O card...

2 Specifications

	Specific
Carrier Board	Y-C8
Module	NVIDIA Jetson AGX Xavier / AGX ORIN Series Modules
Temperature	-40 ~ +85°C
Dimensions (L×W×H)	170mm * 170mm * 34mm (Including I/O ports and mounting holes)
Weight	260g

Power Supply	Spec
Input Type	DC
Input Voltage	+12V

I/O Ports

Interface	Quantity	Interface	Quantity
USB3.0 Type-A	2	Micro USB	1
miniPCle Slot	2	HDMI	1
M.2 Key M Slot (2280)	2	CAN (include transceiver)	2
RTC Battery Connector	1	RJ45	2
RS232 serial port	2	Micro SD Card Slot	1
Camera Connector	1	PCle x16	1
Fan Header	1	Power Jack	1
GPIO	4	USB2.0 (10pin Header)	1(2xUSB2.0)
24pin Expansion Header		1(SPI / I2S / I2C / PWM / GPIO)	
Note: When used with the Jetson AGX Xavier module, only one USB Type A supports full speed 3.0, the other USB Type 2.0, and one miniPCle and one M.2 Key M port are unavailable.

3 External I/O Ports

Sign	Function	Sign	Function
J1	Jetson Module Connector	J2	Micro USB Connector
J3	10pin USB Expansion Connector	J4	USB&HDMI Integrated Connector
J5/J6	miniPCIe Slot	J7/J8	M.2 Key M Slot(support 2280 size)
J9	PCIe x16 Connector(Only support PCIe x8 signal)	J10	Double-layer RJ45 Connector
J11	16pin Network Expansion Header	J12	Camera Expansion Header
J13	Double-layer DB9 Connector (RS232)	J14	Debug Serial Port Header
J15	Micro SD Card Slot	J16	CAN & GPIO Connector
J17	24pin Expansion Header	J18	FAN Header
J20	Automatic Power-on Option Header	J21/J23	Power Jack(Concurrent usage is not supported)
J24	RTC Battery Header	J25	Power Control Connector
D71	Power LED	J46	RTC Option Header
SW1	Recovery Button	Reset	Reset Button
J45	System Power Led Header (Switch key indicator light)		

Notes:

- J6 & J8 connectors are not available with the Jetson AGX Xavier module.
- The RJ45 connector near the PCB of the J10 connector can be used directly. The other connector needs to be added to the single-network port NIC through miniPCIe, and the NIC signal can be connected to the J11.
- The J9 PCIe x16 connector supports only PCIe x8 signals and does not support soft shutdown and power-off when V1.0 hardware is used. V2.0 hardware supports soft shutdown and power-off.
- Only one J21 and J23 power supply port needs to be connected during use.
- J24 RTC battery socket, using V1.0 hardware, RTC function cannot be used with AGX ORIN module. V2.0 hardware needs to be used with J46.
- Only V2.0 hardware has the J46 RTC function switch pin.
- The key near the PCB is the Recovery button, and the other key is the Reset button.

4 All-Round Display

5 Connector Description

Jetson Module Connector (J1)		
Function	Connect NVIDIA Jetson AGX Orin / AGX Xavier Series Modules	
Sign	J1	
Type/Model	699pin SO-DIMM	
Explain	For pin definitions of this connector, refer to the pin definition instructions in the NVIDIA Jetson AGX ORIN / AGX Xavier series module datasheet.	

Micro USB 2.0 (J2)						
Function		USB 2.0 OTG connector				
Sign		J2				
Type/Model		Type-B standard Micro USB 2.0 connector (Use to flash system)				
Pin definition						
		Pin	Signal	Pin	Signal	
		1	VBUS	2	USB 2.0 D-	
		3	USB 2.0 D+	4	NC	
		5	GND			

USB2.0 Signal Expansion Header (J3)

Function	USB2.0 Signal Expansion Header			
Sign	J3			
Type/Model	10-pin(2*5), 2.0mm pitch			
Pin definition	Pin	Signal	Pin	Signal
	1	VCC_3V3	2	VCC_3V3
	3	USB1_D3_N	4	USB1_D4_N
	5	USB1_D3_P	6	USB1_D4_P
	7	GND	8	GND
	9	NC	10	NC
	Pin 1 position: right picture identification.			

Ethernet Jack (J10)

Function	10/100/1000Mbps Ethernet			
Sign	J10			
Type/Model	RJ45 ethernet socket(x2 stacked)			
Pin definition	Pin	Signal	Pin	Signal
	1	TP0+	2	TP0-
	3	TP1+	4	TP2+
	5	TP2-	6	TP1-
	7	TP3+	8	TP3-
	The top RJ45 network port needs to be expanded to use the miniPCle port to connect the expanded network port to the J11 pin.			

Network Expansion Header (J11)

Function	Network expansion header			
Sign	J11			
Type/Model	16-pin(2*8), 2.0mm pitch			
Pin definition	Pin	Signal	Pin	Signal
	1	GND	2	VCC_3V3
	3	VCC_3V3	4	VCC_3V3
	5	ETH_ACT	6	ETH_LINK
	7	NC	8	NC
	9	ETH_N_0	10	ETH_P_0
	11	ETH_N_1	12	ETH_P_1
	13	ETH_N_2	14	ETH_P_2
	15	ETH_N_3	16	ETH_P_3

Pin 1 position: right picture identification.
The single-network NIC is expanded through the miniPCle port, which corresponds to the upper network port of the double-layer RJ45 network port.

Debug Serial Port (J14)

Function	DEBUG Serial Port			
Sign	J14			
Type/Model	4-pin, 2.0mm pitch			
Pin definition	Pin	Signal	Pin	Signal
	1	3.3V	2	UART3_TX
	3	UART3_RX	4	GND

The default serial port setting: 115200,8N1.
Pin 1 position: right picture identification.

miniPCle Slot (J5 & J6)					
Function	miniPCle slot				
Sign	J5 & J6				
Type/Model	5.6mm high, support full-length and half-length expansion cards				
Pin definition	Pin	Signal	Pin	Signal	
	1	PEX_WAKE_N	2	VCC_3V3_PCIE	
	3	NC	4	GND	
	5	NC	6	VCC_1V5_PCIE	
	7	PEX_CLKREQ	8	NC	
	9	GND	10	NC	
	11	UPHY_REFCLK_N	12	NC	
	13	UPHY_REFCLK_P	14	NC	
	15	GND	16	NC	
	17	NC	18	GND	
	19	NC	20	NC	
	21	GND	22	PEX_RST_N	
	23	UPHY_RX_N	24	VCC_3V3_PCIE	
	25	UPHY_RX_P	26	GND	
	27	GND	28	VCC_1V5_PCIE	
	29	GND	30	NC	
	31	UPHY_TX_N	32	NC	
	33	UPHY_TX_P	34	GND	
	35	GND	36	USB1_D_N	
	37	GND	38	USB1_D_P	
	39	VCC_3V3_PCIE	40	GND	
	41	VCC_3V3_PCIE	42	NC	
	43	GND	44	NC	
	45	NC	46	NC	
	47	NC	48	VCC_1V5_PCIE	
	49	NC	50	GND	
	51	NC	52	VCC_3V3_PCIE	
	When the AGX Xavier module is installed, PCIE signals at the J6 position are unavailable.				

M.2 Key M Slot (J7 & J8)

Function	M.2 Key M Slot							
Sign	J7 & J8							
Type/Model	Key M , 2280 Size							
Pin definition	Standard M.2 Key M slot							
	When the Jetson AGX Xavier module is used, the M.2 slot on the J8 is unavailable.							
	Pin	Signal	Pin	Signal	Pin	Signal	Pin	Signal
	1	GND	2	VCC_3V3	3	GND	4	VCC_3V3
	5	UPHY_RX5_N	6	NC	7	UPHY_RX5_P	8	NC
	9	GND	10	LED	11	UPHY_TX5_N	12	VCC_3V3
	13	UPHY_TX5_P	14	VCC_3V3	15	GND	16	VCC_3V3
	17	UPHY_RX4_N	18	VCC_3V3	19	UPHY_RX4_P	20	NC
	21	GND	22	NC	23	UPHY_TX4_N	24	NC
	25	UPHY_TX4_P	26	NC	27	GND	28	NC

	65	NC	66	NC	67	NC	68	SUSCLK(32KHz)
	69	NC	70	VCC_3V3	71	GND	72	VCC_3V3
73	GND	74	VCC_3V3	75	GND			

PCIe Connector (J9)

Function	PCIe Connector
----------	----------------

Sign	J9
------	----

Type/Model	11mm high, PCIe x16
------------	---------------------

This port supports only PCIe x8 signals but not PCIe x16 signals. If V1.0 hardware is used, this port does not support soft shutdown and power-off. If V2.0 hardware is used, this port supports soft shutdown and power-off.

Micro SD Card Slot (J15)

Function	Micro SD Card Slot			
Sign	J15			
Type/Model	Micro SD (TF)			
Pin definition	Pin	Signal	Pin	Signal
	1	DATA2	2	DATA3
	3	CMD	4	VCC(3.3V)
	5	CLK	6	GND
	7	DATA0	8	DATA1
	9	CD	10	GND
	11	GND	12	GND
	13	GND		

Fan Header (J18)

Function	4-pin fan header for 12V PWM fan			
Sign	J18			
Type/Model	47053-1000			
Pin definition	Pin	Signal	Pin	Signal
	1	GND	2	POWER(12V)
	3	TACH	4	PWM
	Pin 1 position: right picture identification.			

CAN & GPIO Connector (J16)

Function	CAN & GPIO signal connector																								
Sign	J16																								
Type/Model	2EDGKRH-3.5-2X6																								
Pin definition	The pin definition as follows:																								
	Pin	Signal	Pin	Signal																					
	1	CAN1_H	2	3.3V																					
	3	CAN1_L	4	GND																					
	5	GND	6	GPIO08																					
	7	CAN0_H	8	GPIO09																					
	9	CAN0_L	10	GPIO17																					
	11	GND	12	GPIO27(PWM)																					
	The resulting GPIO mapping numbers are shown in the following table, GPIO high level voltage is 3.3V.																								
	<table><tr><th>Modules</th><th colspan="2">AGX Xavier</th><th>AGX ORIN</th></tr><tr><th>Jetpack Version</th><th><Jetpack5.0</th><th>>=Jetpack5.0</th><th></th></tr><tr><td>GPIO08</td><td>256</td><td>313(PBB.00)</td><td>325(PBB.01)</td></tr><tr><td>GPIO09</td><td>257</td><td>314(PBB.01)</td><td>324(PBB.00)</td></tr><tr><td>GPIO17</td><td>417</td><td>436(PQ.01)</td><td>444(PP.04)</td></tr><tr><td>GPIO27</td><td>393</td><td>419(PN.01)</td><td>433(PN.01)</td></tr></table>		Modules	AGX Xavier		AGX ORIN	Jetpack Version	<Jetpack5.0	>=Jetpack5.0		GPIO08	256	313(PBB.00)	325(PBB.01)	GPIO09	257	314(PBB.01)	324(PBB.00)	GPIO17	417	436(PQ.01)	444(PP.04)	GPIO27	393	419(PN.01)
Modules	AGX Xavier		AGX ORIN																						
Jetpack Version	<Jetpack5.0	>=Jetpack5.0																							
GPIO08	256	313(PBB.00)	325(PBB.01)																						
GPIO09	257	314(PBB.01)	324(PBB.00)																						
GPIO17	417	436(PQ.01)	444(PP.04)																						
GPIO27	393	419(PN.01)	433(PN.01)																						
Description:																									
Take the AGX Xavier module, GPIO08, as an example, if the system version earlier than Jetpack5.0, run this command:																									
\$ echo 256 > /sys/class/gpio/export																									
After GPIO is enabled, the corresponding file name is generated: gpio256;																									
Then system version is later then Jetpack5.0, run this command:																									
\$ echo 313 > /sys/class/gpio/export																									
After GPIO is enabled, the corresponding file name is generated: PBB.00.																									

24-pin Extension Header (J17)

Function	Multi-function signal extension interface			
Sign	J17			
Type/Model	24-pin(2.0mm pitch, 2*12)			
Pin definition	Pin	Signal	Pin	Signal
	1	5V	2	3.3V
	3	GND	4	GND
	5	SPI1_MOSI_3V3	6	I2S2_CLK_3V3
	7	SPI1_MISO_3V3	8	I2S2_DOUT_3V3
	9	SPI1_SCK_3V3	10	I2S2_DIN_3V3
	11	SPI1_CS0_3V3	12	I2S2_FS_3V3
	13	SPI1_CS1_3V3	14	GND
	15	GND	16	I2C5_CLK_3V3
	17	PWM01_3V3	18	I2C5_DAT_3V3
	19	GND	20	GND
	21	GPIO35_PWM3_3V3	22	MCLK05_3V3
	23	GND	24	GND
	Pin 1 position: right picture identification.			

Auto Power On (J20)

Function	Auto-Power-On is enable when pin1 and pin2 are tied together			
Sign	J20			
Type/Model	2.0mm pitch, 2pin			
Pin definition	Pin	Signal	Pin	Signal
	1	3.3V	2	ACOK
	Pin 1 position: right picture identification.			

Power Jack (J21 & J23)

Function	Power supply input terminal			
Sign	J21 & J23			
Type/Model	44206-0001 & 39281083			
Pin definition	J21 power input port pins are defined as follows:			
	Pin	Signal	Pin	Signal
	1	+3.3V	2	+3.3V
	3	GND	4	+5V
	5	GND	6	+5V
	7	GND	8	NC
	9	+5V	10	+12V
	11	+12V	12	+3.3V
	13	+3.3V	14	-12V
	15	GND	16	PS_ON#
	17	GND	18	GND
	19	GND	20	NC
	21	+5V	22	+5V
	23	+5V	24	GND
	J23 power input port pins are defined as follows:			
	Pin	Signal	Pin	Signal
	1	GND	2	GND
	3	GND	4	GND
	5	+12V	6	+12V
	7	+12V	8	+12V
	During use, only one of the interfaces is required. The pin is shown on the right.			

Power Supply Control Header (J25)

Function	Power supply control				
Sign	J25				
Type/Model	XH2.54-4P/ 2.54 pitch, 4pin				
Pin definition	Pin	Signal	Pin	Signal	
	1	POWER_ON	2	GND	
	3	RESET	4	GND	
Connect this interface to the chassis switch and unshort-circuit J20 to set the system to press Key start. The upper right image shows the V1.0 hardware diagram, and the lower right image shows the V2.0 hardware diagram. Pin 1 Position: right picture identification.					

System Power LED (J45)

Function	System Power LED											
Sign	J45											
Type/Model	2.0mm pitch, 2pin											
Pin definition	<table><tr><th>Pin</th><th>Signal</th><th>Pin</th><th>Signal</th></tr><tr><td>1</td><td>LED+</td><td>2</td><td>LED-</td></tr></table>				Pin	Signal	Pin	Signal	1	LED+	2	LED-
	Pin	Signal	Pin	Signal								
	1	LED+	2	LED-								
Pin 1 position: right picture identification.												

RTC Power Supply Selection Header (J46)						
Function	The RTC function switches when different modules are adapted					
Sign	J46					
Type/Model	2.54mm pitch, 3pin					
Pin definition	Pin	Signal	Pin	Signal	Pin	Signal
	1	O	2	R	3	X
	Pin 1 Position: right picture identification. With AGX ORIN module, if you need to use RTC function, please short pin1, pin2, If the AGX Xavier module needs to use the RTC function, short pin2 and pin3					

RTC Battery Socket (J24)				
Function	Provides power support for the core board clock circuit			
Sign	J24			
Type/Model	2pin			
Pin definition	Pin	Signal	Pin	Signal
	1	VCC (3.3V)	2	GND
	Pin 1 position: right picture identification. When the V1.0 hardware is combined with the AGX ORIN module, the RTC function is not supported.			

6 Ordering Information

Order Type	Function
Y-C8	NVIDIA® Jetson™ AGX ORIN/AGX Xavier series module is equipped with miniaturized carrier board.

E-commerce Platform

Taobao Store Address: <https://shop333807435.taobao.com/>

Ali International Station Address: <https://plink-ai.en.alibaba.com/>

7 Recovery Mode

Jetson core module can work in normal mode and Recovery mode. In Recovery mode, it can perform file system update, kernel update, Bootloader/UEFI update, BCT update and other operations.

To enter the Recovery mode, perform the following steps:

Power off the system.

Use a Micro-USB cable to connect the Micro-USB port (J2) of the Y-C8 to the Jetson development host USB port.

The Jetson development host should be Ubuntu18.04 or Ubuntu20.04 based on X86 architecture.

Press the Recovery key (SW1) to power the system. Hold down the Recovery key (SW1) for more than 3 seconds, and then release the Recovery key (SW1).

When the system enters Recovery mode, you can perform subsequent operations.

8 Method of Application

- Make sure all external system voltages are off.
- Install the Jetson core module onto the J1 high-speed connector. Ensure that the connectors are aligned with even force. After the module is installed in place, install the core module fixing screws.
- Install necessary external cables. (such as: the display line connected to the HDMI display, the power input line for the system power supply, the USB cable connecting the keyboard and mouse...)
- Connect the power cable to the power supply.(Make sure that the heat dissipation device on the core module is installed before power-on)
- For a system without a protective cover, do not move the hardware system after the system is powered on. Do not touch the circuit board or any electronic components on the circuit board with your body.

9 GPIO Test

Y-C8 leads to the 4-way GPIO of the Jetson core modules. Programmable output voltage 3.3V, please note that the input voltage does not exceed 3.3V.

Take the AGX ORIN module, L4T35.3.1, GPIO08 as an example:

The content after the '#' in the following command is a comment and does not need to be added when executing the command.

- `sudo su`
- `echo 325 > /sys/class/gpio/export` # Enable GPIO (Or initialize GPIO)
- `echo out > /sys/class/gpio/PBB.01/direction`
#Set the GPIO input and output directions to out or in.
- `echo 1 > /sys/class/gpio/PBB.01/value`
Set the GPIO output high/low level to 1 for high and 0 for low.

#The preceding absolute path name is based on the actual path name generated after GPIO is enabled.

When set to the input state, you can only read values. When set to the output state, you can read and write values.

- `cat /sys/class/gpio/PBB.01/value` #Get GPIO value.

The output state can be measured using a multimeter to measure the voltage between the specific lead heel GND.

10 CAN Test

Y-C8 is equipped with two CAN signals when it is equipped with Jetson module. During test, connect the CAN_H of the device to the CAN_H of the device under test and the CAN_L to the CAN_L of the device under test.

The test command is as follows:

- `sudo apt-get install busybox can-utils`

#Writes the specified value to a register

Different modules need to write to the address of the register, and the value written is inconsistent. See the links at the end of this section for details.

- `sudo busybox devmem 0x0c303020 w 0x458`
- `sudo busybox devmem 0x0c303018 w 0x400`
- `sudo busybox devmem 0x0c303010 w 0x458`
- `sudo busybox devmem 0x0c303008 w 0x400`
- `sudo modprobe can` #Load the CAN bus subsystem support module
- `sudo modprobe can_raw` #Load the original CAN protocol module.
- `sudo modprobe mttcan`#Load CAN interface support
- `sudo ip link set can0 type can bitrate 500000`
#Set CAN0 bit rate to 500k bps
- `sudo ip link set can1 type can bitrate 500000`
#Set CAN1 bit rate to 500k bps
- `sudo ip link set up can0` #Open CAN0
- `sudo ip link set up can1` #Open CAN1
- `candump can0` #Set CAN0 to receive
- `cansend can1 1F223344#1122334455667788`

Open another terminal to send data through CAN1. After sending, there will be data echo at the receiving end of CAN0.

See links for different module register values:

Controller Area Network (CAN) — Jetson Linux Developer Guide
documentation (nvidia.com)

11 Serial Port Test

Y-C8 is equipped with two RS232 serial ports as standard when it is paired with Jetson module, which can be used for self-collecting test of a single serial port and interconnection test of two serial ports. The command is as follows:

- `sudo apt-get install cutecom` #Install the serial port test tool
- `sudo cutecom` # For a single-serial port test, you only need to open one cutecom interface on each terminal. For a two-serial port connection test, use two terminals and open two cutecom interfaces.
- When testing a single serial port, connect the RX of a single serial port to the TX. When the two serial ports are connected, the RX of UART1 is connected to the TX of UART2, and the TX of UART1 is connected to the RX of UART2.

The interface of the serial port test tool cutecom is as follows:

12 Special Instructions

- Initial system username: **nvidia** , password: **nvidia** , no password su. If root permissions are required, use sudo to grant permissions, or use sudo su to access the root user.
- The pre-installed system is pure by default and does not contain Jetpack software. You can use the following command to install the software. Do not replace or modify the default software source before installation:
 - `sudo apt-get update`
 - `sudo apt-get install nvidia-jetpack`
- It can also be installed over the network using SDKmanager software.
- For more information please refer to :Jetson wiki (plink-ai.com)
